Overview:
You need to do simple family diary. Mother will import list of housework and father will
distribute tasks between members of the family. No restrictions in the
implementation, you can apply all your imagination.

Description:
Application's features

- registration/login of family member(two fields "Name" and "Password")
- 3 categories of registered members(mother, father, child)
- upload file with housework which stores in DB
- distribute tasks between members of the family
- view own tasks
- mark task as "Done"

Family member permissions

Member	View task	Mark "Done"	Distribute	Upload file
Father	+	+	+	
Mother	+	+		+
Child	+	+
